

E911

Can emergency responders find a 911 caller in your office building, hotel, classroom, hospital, factory?

Your establishment is legally liable for 911 calls that fail.

WHAT YOU NEED TO KNOW

Federal and State laws are being enacted that make you liable if **911 responders can't locate** the caller inside your establishment. Fines are as high as \$5,000 **per incident**.

Your phone system must be able to **provide the exact location** from which the call is made, so EMS can **FIND** the person quickly. For example:

- Hotel Room
- Office Number
- Classroom
- Factory Floor

We can provide information about **your State's laws**.

A simple test can determine if your phones are compliant.
Call us at 844-566-4911 to find out.

Voice Carrier can help you get compliant and prevent both tragedy and liability. E911 capabilities are built into all Voice Carrier phone systems.

Are your phones safe?

EMERGENCY PREPAREDNESS

Emergency response integration with all phones, overhead paging, alarm system, and front-door intercom.

Many phone systems do not provide emergency information.

Does yours?

We'll show you how to check your system.

What's required to be compliant?

1. Callers must be able to dial 911 without an outside access code (#9).
2. Dispatchers must be able to locate the caller (e.g. classroom, office number).
3. 911 operators must be able to call the phone back directly.
4. 911 calls must connect to emergency services in closest proximity to caller.
5. First responders are given the caller's detailed location inside the building.

The overwhelming response from our customers has been, "Thanks for keeping us compliant and safe. We just assumed our current phone company was up to date."

Voice Carrier's cloud-based phone systems inherently cost less than traditional systems—and we pass the savings on to you. With over 100 modern features, it's a more powerful way for your company to connect, at a much lower cost.
