

IntelliSIP[®] NextGen Business Phone Service

Transform your onsite phone system into a powerful IP voice platform.

Get the capabilities you need tomorrow on the system you have today. IntelliSIP adds advanced features and capabilities to your current phone system, while lowering your monthly cost. Reinvent, repair, and rejuvenate your equipment. **DON'T REPLACE IT. EMPOWER IT!**

Why do you want IntelliSIP?

You want to extend the life of the investment in your onsite phone system.

You want to add productivity-boosting capabilities to your current phone system like auto-attendants, employee conference lines, voicemail to email, call queues, and intelligent forwarding.

Your phone system is failing but an entirely new one is too expensive.

You want to call branch offices and remote workers without long-distance charges, even overseas.

You want a guaranteed reduction in your phone bill.

You want to redirect calls instantly in an emergency and always stay 'open for business'.

You want global service with a single phone system and a single bill.

You are hesitant to make the full transition to the cloud.

You want unlimited local and long distance calling.

You want to easily scale and customize your service without technical staff or more hardware.

How it Works

IntelliSIP[®] simply adapts your onsite phone equipment (PBX) so you can get all the advanced features and functionality of an internet voice system (VoIP) through your standard internet connection.

Cost Reductions

IntelliSIP[®] uses the power of the internet to deliver your calls. This inherently costs 40-60% less *and we pass the savings on to you.*

Reliable

In a disaster, numbers automatically reroute to another location or employee cell phones. If your onsite hardware goes down, the system activates your cloud backup PBX. In case of internet outages, IntelliSIP LTE™ can route your service cellularly (optional).

Scalable

Add lines or modify your service same day, instead of days or weeks.

powered by

With over 100 modern features and free US-based customer support, IntelliSIP is simply a more powerful way for your company to connect, at a much lower cost.

IntelliSIP[®] Don't replace it. Empower it!

Keep your equipment

Many businesses haven't taken advantage of the benefits associated with IP communications because they feel tied to their existing system. IntelliSIP is a simple way to retain your equipment investment and add powerful features, while reducing monthly costs through IP connectivity.

Unlimited call capacity (trunks)

Callers never get a busy signal during a surge in business or the high season. Unlike traditional phone lines that allow one call per line, IntelliSIP includes limitless voice channels. Your business has access to as many lines (trunks) as needed without the burden of paying for additional capacity or worrying about employee call volume.

Same-day flexibility

Add/remove numbers or change your service same day. Want a new conference line in your London office tomorrow? Done.

Shared service

Share minutes company wide instead of varied long-distance rates per location.

Disaster recovery

In the event of a power outage, slow internet, or equipment problems, IntelliSIP will autodetect the failure and re-route calls to another location or cellular phones.

Free intranet global calling

Call any number in your network - branch offices, home offices, the warehouse - anywhere in the world, without paying long-distance charges.

Simple all-inclusive plans

Straight-forward plans include all local, long distance, incoming, outgoing, and conference calls. No more long-distance or per-minute rates or juggling seat fees and subscriptions. Your usage is simple...and so is your monthly bill.

Location independence

Unlike other providers where the distance from your location to their rate center may increase your cost, IntelliSIP is location independent... from sea to shining sea.

Need-based service

Use as much or as little service as your business requires. Voice Carrier's pay-as-you-grow minute bundles offers maximum flexibility and ensures that you never pay for capacity you don't need.

Standard Features

IntelliSIP adds business-boosting capabilities to your current onsite legacy phone equipment. These, and over 75 other features come standard.

Auto-attendants

Callers use a virtual receptionist to select how they are routed. Includes music on hold.

Conference calls

Have an endless number of conference lines for spontaneous or planned meetings.

Interactive voice recognition

Record custom prompts for your auto-attendant. Route calls quickly and correctly.

Find me/Follow me

Users can route their calls to multiple phones to ring in a custom sequence or at once.

Custom routing schedules

Route calls to any location, any other number or a voicemail depending on the day or time.

Ring groups

Direct calls to multiple extensions that ring all at once or in a custom order.

Voicemail to email

Retrieve voicemail from your desk phone, email, computer, mobile phone, or tablet.

Online admin/user portal

Admins manage the system and users customize their lines using an online portal.

Remote office

Connect multiple locations, home offices, or facilities all under one system.

Call queue

Places callers in a "queue" until the next available agent or employee can help them.

Call park

Put a call on hold and retrieve it from any other connected device in the system.

Paging groups

Broadcast announcements to your entire office, a team, or department.

...plus many more.
